## Cost-effective, real-time data replication and duplication solution

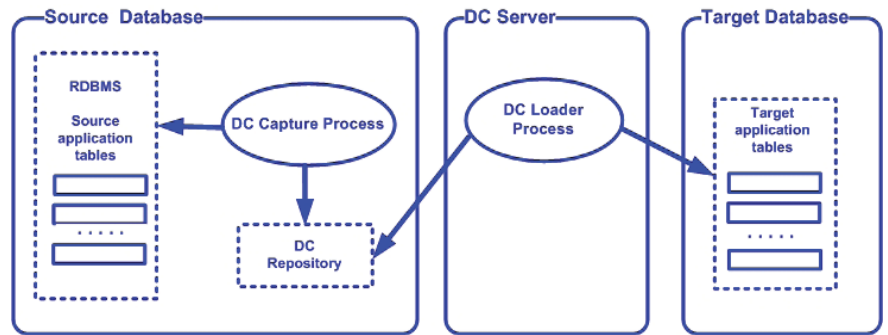

The DataCurrents software suite provides data replication between Oracle databases to Oracle, Microsoft SQL Server, MySQL, IBM DB2, Sybase, and other RDBMS platform databases that support JDBC database connectivity. Without requiring changes within source replicated tables, DataCurrents supports all OS platforms and editions of source Oracle databases.

Features	Benefits
Data replication between databases from different vendors (data replication from Oracle databases to Oracle, SQL Server, MySQL Sybase, and other databases supporting JDBC connectivity)	Cost effective real-time data replication, duplication solutions
No dependencies on Oracle editions	Enterprise Application Integration (EAI), reporting, data archiving solutions
No dependencies on operating systems for source and target databases; product can replicate data between any combinations of operating systems	Zero-downtime data migrations from Oracle to Oracle, Oracle to SQL Server, MySql, or other database vendors
Transparent to applications—no changes required to database schemas	Small footprint, minimum resource consumptions

## Components

DataCurrents consists of four major modules:

- [1] DCRepository
- [2] DCCapture process
- [3] DCServer
- [4] DCLoader process

## Specifications

### Supported operating systems:

- Windows XP Professional (32 or 64 bit)
- Vista (32 or 64 bit)
- >Windows Server 2003, 2008
- Linux
- Unix: Solaris, HP-UX, AIX, Tru64

### Requirements:

Installed Java Runtime Environment(JRE) versions 1.6 or higher

### Supported databases:

- Oracle source database - 9iR2, 10gR1, 10gR2, 11gR1 or 11gR2, Enterprise, Personal, Personal 1, Express Editions
- Oracle target database – 7, 8, 8i, 9i, 10g, 11g; all editions
- Microsoft SQL Server 2005, 2008; all editions
- MySQL 4, 5; all editions
- DB2 versions 7, 8, 9; all editions
- Sybase
- Other RDBMS platforms supporting jdbc connectivity

See how DataCurrents can help you replicate or migrate data between databases and meet your business requirements—free for 30 days!

Visit [www.data-currents.com/trial](http://www.data-currents.com/trial) to download a free 30-day trial of DataCurrents.

The fully-functional free trial version demonstrates the functionality of data replication between databases, and can be used for data replication between Oracle and SQL Server, MySQL or Oracle databases.
